

Xinet Server provides a central hub within your creative department that manages work-in-progress (WIP) and approved assets throughout the creative production process.

Built by creatives for creatives, Xinet Server integrates directly with creative desktop applications like Adobe Creative Cloud for an automatic lift in creative DAM adoption and usage while providing seamless collaboration between creatives, stakeholders, vendors, and clients.

Accelerate WIP workflows and deliver assets to market faster:

Rapid on-premis DAM

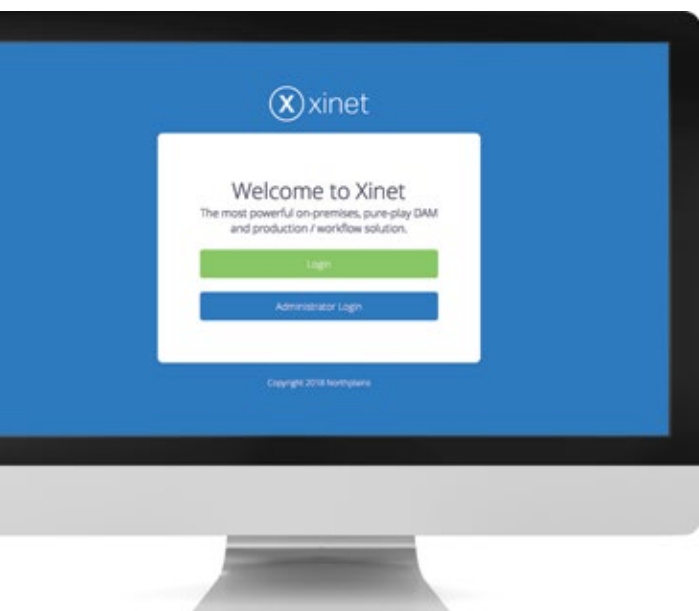

Quickly find the digital assets you need, discover assets you didn't know you had, and push content across channels, FAST - all from within your local network or from the cloud via Xinet's proprietary accelerator X-Pipe.

Strongest creative workflow automation

Use custom triggers, actions and automation to manage version control, reviews/approvals and job information, etc. to build a single source of truth that reduces confusion and ensured the most recent work-in-progress and approved assets are available immediately.

Integration so tight, no one knows it's there

Xinet Server fits tightly into your existing workflows via mounted server volumes and our Adobe CC plugins to allow creatives to search, open, edit, and create assets as they always have – without check-ins and check-outs - for an automatic lift in adoption.

Xinet-Server helps thousands of enterprise companies around the world work better, faster and smarter by increasing speed to market and ROI.

Used alone, or to augment your organizational DAM implementation, Xinet's ability to satisfy the unique needs of the creative user make it the DAM of choice for agencies and in-house creative departments.

SERVER FEATURES
